

E&P Würtz &Co GmbH

Würtz formulates and supplies release agents, wetting agents, catalysts and other specialised additives to the reconstituted wood-based panel and panel lamination industries.

Würtz's 50 years of success is from a broad base of knowledge and experience spanning several industries

PAT® is a globally respected registered brand name

--- **Polymer Additive Technology** ---

Paper Impregnation and Lamination

Wetting agents, release agents, catalysts and a wide range of other additives and special products for impregnation and lamination

Particleboard MDF and OSB

For the production of chipboards fiberboards and OSB, a multitude of **PAT®** release agents is available.

Depending on production processes and individual circumstances, we offer products that can be applied to material to be pressed or that can be used to treat the press plates and press belts

All PAT® release agents are environmentally friendly, completely biodegradable products and cause no harm at later thermal utilization of press plates or belts
